

Pre-assembled Hotspot

Thank you for purchasing a pre-assemble Hotspot. This unit has Pi-Star already installed and the basic configuration has already been done. You will still need to set your callsign and location information by accessing the configuration page.

Download the Pi-Star Software Setup Instructions at www.n1stn.com/manuals-documents/

The initial steps will **NOT** apply to the pre-assembled Hotspot. You **DO NOT** need to download SD Card Formatter, Rufus Etcher, Pi-Star or the basic config restore file.

Scroll down to page 3 and continue from there. The micro SD card is already installed in the Pi zero so please disregard that step.

Please read the full instruction sheet though. It contains information that will assist you in finishing the setup.
